1 What will be the output of the following code snippet?

## def func(a, b):

return b if a == 0 else func(b % a, a)

**print**(**func**(**30**, **75**))

- a) 10
- **b)** 20
- c) 15
- **d**) **0**

2 numbers = (4, 7, 19, 2, 89, 45, 72, 22)

sorted\_numbers = sorted(numbers)

even = lambda a: a % 2 == 0

even\_numbers = filter(even, sorted\_numbers)

print(type(even\_numbers))

- a) Int
- b) Filter
- c) List
- d) Tuple

## **ANS-Filter**

- 3) As what datatype are the \*args stored, when passed into
- a) Tuple
- b) List
- c) Dictionary
- d) none

4) 
$$set1 = \{14, 3, 55\}$$

$$set2 = \{82, 49, 62\}$$

print(len(set1 + set2 + set3))
<ul> <li>a) 105</li> <li>b) 270</li> <li>c) 0</li> <li>d) Error Ans-Error</li> </ul>
5) What keyword is used in Python to raise exceptions?
a) raise
b) try
c) goto
d) except Ans- except
<b>6</b> ) Which of the following modules need to be imported to handle date time computations in Python?
a) timedate
b) date
c) datetime
d) time
Ans-datetime
7) What will be the output of the following code snippet?
print(4**3 + (7+5)**(1+1))
a) 248 b) 169 c) 208 d) 233
Ans -208 8) Which of the following functions converts date to corresponding time in Python?
a) strptime
b) strftime
c) both a) and b)
d) None Ans -Both
9) The python tuple isin nature.
a) mutable
b)immutable

unchai	ngeable
c) none	
ans -imm	utable
	is a built-in function that returns a range object that consists series of integer numbers, we can iterate using a for loop.
B. so C. d	ictionary{}  None of the mentioned above  Ans-range()
Amongst	which of the following is a function which does not have any name?
B. S C. L	Del function Show function Ambda function None of the mentioned above
A	Ans-Lambda function
Question 1	2
The mod	ule Pickle is used to
В. С С. В	Perializing Python object structure De-serializing Python object structure Both A and B None of the mentioned above
Question	13
Amongst a binary	which of the following is / are the method of convert Python objects for writing data in file?
B. d C. lo	et() method ump() method oad() method Jone of the mentioned above

	1 1	P 41	£-11	•	/ 41_	411		unpickling	1 . 4 .	<b>c</b>	1	. e1 - 6

- A. load()
- B. set() method
- C. dump() method
- D. None of the mentioned above

ANS-load()

## 15.A text file contains only textual information consisting of \_.

- A. Alphabets
- B. Numbers
- C. Special symbols
- D. All of the mentioned above

ANS-D

16. Which Python code could replace the ellipsis (...) below to get the following output? (Select all that apply.)

```
captains = {
   "Enterprise": "Picard",
   "Voyager": "Janeway",
   "Defiant": "Sisko",
}
```

Enterprise Picard,

Voyager Janeway

Defiant Sisko

a) for ship, captain in captains.items():

```
print(ship, captain)
```

b) for ship in captains:

```
print(ship, captains[ship])
```

c) for ship in captains:

```
print(ship, captains)
             d) both a and b
Ans -d
 17) Which of the following lines of code will create an empty dictionary named captains?
    a) captains = \{dict\}
    b) type(captains)
    c) captains.dict()
    d) captains = \{\}
Ans-d
 18) Now you have your empty dictionary named captains. It's time to add some data!
 Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager": "Janeway",
 and "Defiant": "Sisko".
 Which of the following code snippets will successfully add these key-value pairs to the
existing captains dictionary?
     a) captains{"Enterprise" = "Picard"}
    captains{"Voyager" = "Janeway"}
     captains{"Defiant" = "Sisko"}
     b) captains["Enterprise"] = "Picard"
     captains["Voyager"] = "Janeway"
     captains["Defiant"] = "Sisko"
    c) captains = {
       "Enterprise": "Picard",
       "Voyager": "Janeway",
       "Defiant": "Sisko",
```

ANS-c

d) None of the above

}

19) You're really building out the Federation Starfleet now! Here's what you have:  $captains = {$ "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", "Discovery": "unknown", Now, say you want to display the ship and captain names contained in the dictionary, but you also want to provide some additional context. How could you do it? a) for item in captains.items(): print(f"The [ship] is captained by [captain].") b) for ship, captain in captains.items(): print(f"The {ship} is captained by {captain}.") c) for captain, ship in captains.items(): print(f"The {ship} is captained by {captain}.") d) All are correct ANS=b) &c) 20 )You've created a dictionary, added data, checked for the existence of keys, and iterated over it with a for loop. Now you're ready to delete a key from this dictionary:  $captains = {$ "Enterprise": "Picard", "Voyager": "Janeway", "Defiant": "Sisko", "Discovery": "unknown", }

What statement will remove the entry for the key "Discovery"?

- a) del captainsb) captains.remove()c) del captains["Discovery"]d) captains["Discovery"].pop()

Ans-d
